

THE
Plebifesto

**We are the all singing, all dancing
exit liquidity of the World**

The Plebifesto

"No one is useless in this world who lightens the burdens of another." - Charles Dickens

Foreword - From Hexy Bastard to you:

Gm. It is great to see you. If you have arrived at this destination then you need not be alone, there are many who feel the same way as you do. If you, like me, are a **PoorPleb** then you no longer have to fear the future; the tide is turning and we will ride the waves to freedom.

There are of course those who do not wish for us to launch. Why? Because those who have it have all become victims of their own success. Wealth is a hell of a drug; and greed is the biggest side effect.

We live in a world where the rich get richer and the poor get poorer. The world of cryptocurrency is no different. The world is full of lost hope and empty promises. Small players in the space are often eaten alive by an unfair and biased structure. We are the last to know and the last to react; we are simply crypto krill for the whales to feast upon.

The system is rigged, they tell us to margin trade, they tell us to buy serial numbers loosely related to JPEGs, they manufacture the narrative and ensure the opposite; all in pursuit of the maximum amount of casualties.

For too long we have been exit liquidity, for too long we have been chastised, for too long we have been rekt...

No more...

The **PoorPleb** will finally have a chance to reign supreme...

"The New Colossus" - Emma Lazarus

*Not like the brazen giant of Greek fame,
With conquering limbs astride from land to land;
Here at our sea-washed, sunset gates shall stand
A mighty woman with a torch, whose flame
Is the imprisoned lightning, and her name
Mother of Exiles. From her beacon-hand
Glow world-wide welcome; her mild eyes command
The air-bridged harbor that twin cities frame.
"Keep, ancient lands, your storied pomp!" cries she
With silent lips. "Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tost to me,
I lift my lamp beside the golden door!"*

About PoorPleb (\$PP)

"So much of cryptocurrency is meme token bullshit with no innovation whatsoever" - Richard Heart

PoorPleb (\$PP) is an ERC20 token on the Ethereum network with absolutely zero features - there is no tax and no inflation. There is nothing groundbreaking here, **PoorPleb (\$PP)** is simply a meme token with three functions: buy, sell and send.

PoorPleb (\$PP) is an experiment, an opportunity, a light at the end of the tunnel. It serves only one purpose, to transfer wealth to the many from the few.

How would we do this you may ask? By ensuring fair distribution to the many and completely excluding the few. The 99% will get an equal opportunity to ride the FOMO wave in reverse. The whales will be furious, how dare we penalise them? The answer is simple... The rich do not need to be enriched further.

We use an innovative system called **"Proof of Pleb"** to ensure consensual distribution. To claim these tokens you have to sign a statement from your Ethereum address to essentially admit that you are a pleb.

Only the humble can thrive in our system.

PoorPleb (\$PP) serves as a tool for the many - we have the power and will to create change in the system. Our voices are loud, our voices will be heard; with a common goal we can achieve amazing things, changing the space for the better. If we spread the message of **PoorPleb (\$PP)** then success should swiftly follow.

PoorPleb (\$PP) will work as a bridge between communities where we will allow small players from successful meme tokens and projects to freeclaim a set amount of tokens. The key to success is building a strong community. There will be over 2 million users that will be eligible for the free airdrop. Even if only 1% of these users claim that will give us a 20,000 holder head start in adoption. 1% is an incredibly low estimate, but who can say no to free money? Especially the **PoorPleb**.

PoorPleb (\$PP) will be immutable and 100% decentralised.

The order of the Plebs

"Weaknesses are just strengths in the wrong environment." - Marianne Cantwell

Distribution of **PoorPleb** will be very different to that of most projects. Whilst airdrops are normally scaled to benefit the larger players, we will flip this narrative upside down.

We will distribute free tokens **ONLY** to the smallest players in the system; those that have the largest mountain to climb with the least chance of success. Those who need the opportunity more.

The token will be claimable to people who had between \$1 and \$1,000 of the following tokens in their address at GMT 00:00 16/07/22.

SHIBA INU - \$SHIB (ETH)
CULT DAO - \$CULT (ETH)
FLOKI INU - \$FLOKI (ETH)
BABYDOGE - \$BABYDOGE (ETH)
DOGELON MARS - \$ELON (ETH)
PULSEDOGECOIN - \$PLSD (ETH)
PULSEDOGE - \$PULSEDOGE (BSC)
CUMROCKET - \$CUMMIES (BSC)

The token will also be airdropped to those who sacrificed less than \$1,000 for freedom of speech and freedom of movement during the **Pulsechain / PulseX** sacrifice. Our views align very closely with this community.

Each address will receive a set amount of **PoorPleb (\$PP)** tokens - for each free claim the PA (Pleb Address) will receive 33.3% **PoorPleb (\$PP)**. The PA (Pleb Address) serves to protect the ecosystem, there should be no expectations of profit from the work of others.

Plebonomics

"You must gain control over your money or the lack of it will forever control you" - Dave Ramsey

There is a maximum **PoorPleb (\$PP)** freeclaim per address - no more, no less, even if the address meets the eligibility criteria multiple times over. This ensures an equal opportunity for all participants.

Upon launch there will be a 69 day claim phase where these addresses will be able to claim the airdrop, all unclaimed tokens will remain unminted, forever. After the claim phase **PoorPleb (\$PP)** will have absolutely zero inflation.

There are two ways to increase your token amount, one would be to purchase them on the open market once the token is launched, the second would be to sacrifice for "**Freedom of Plebs**" prior to the token launch during a 42.0 day sacrifice phase.

The token will be a zero utility ERC20 with zero features - Simply a meme token which you can buy, sell and send, designed with one purpose; to infuriate whales and create FOMO.

We may have plans to build upon this, added features may be added on the **Pulsechain** network. As an ERC20 **PoorPleb (\$PP)** will be automatically copied 1:1 to **Pulsechain** as a PRC20. We will encourage all **PoorPlebs** to take advantage of the great opportunity that **Pulsechain** will bring to the cryptocurrency ecosystem.

No longer will the **PoorPlebs** be exploited by horrific Ethereum transaction fees.

Ambitions of the PoorPleb

"The only impossible journey is the one you never begin". - Tony Robbins

It is important for investors to be aware that the team behind **PoorPleb (\$PP)** does not work for you. This token is designed to be a decentralised community led effort, however we can state what we would like to see happen in an ideal world.

- **A strong, well educated community**
- **Listing on CoinMarketCap, Coin Gecko, Nomics etc.**
- **Endorsements with reputable content creators**
- **Competitions**
- **Advertising**
- **Incentives for users to migrate to Pulsechain upon launch**

Listing on centralised exchanges (We strongly recommend that all users hold their tokens in their own self custody address with their own private keys, such as Metamask or Trustwallet. Not your keys, not your tokens.

****IMPORTANT DISCLAIMER****

This is a token for the people, many hands make light work.

As a holder of **PoorPleb (\$PP)** you are encouraged to spread the word about this wonderful opportunity.

Shill the project and pump your bags. The team at **PoorPleb(\$PP)** does not work for you.

There must be no expectations of profit from the work of others.

Power to the Pleb

FAQ's

*"The important thing is not to stop questioning.
Curiosity has its own reason for existing."
- Albert Einstein*

What is PoorPleb (\$PP)? - PoorPleb (\$PP) is a basic ERC20 token on the Ethereum network, where its only features are to buy, sell and send. By default this will be copied over to **Pulsechain** 1:1 when launched.

Why will PoorPleb (\$PP) be successful? - PoorPleb (\$PP) is an experiment to see what would happen to a system that was only distributed for free to smaller participants. Nobody knows how well this project will perform as it is a unique idea with nothing to compare to. As with all speculative assets, the free market will decide the value. The onus for success falls upon the participants of **PoorPleb (\$PP)** to promote the project. **PoorPleb (\$PP)** has a wonderful narrative, this alone could be the secret to future success.

Are the PoorPleb (\$PP) team communists? - No. The token is being distributed fairly to freeclaimers but those who want to secure a large position have to pay for it. We strongly support capitalist ideas but believe this system, at least in cryptocurrency, has gotten out of hand. We want to give an opportunity for the little guy to get ahead.

Why is there a sacrifice phase? - The sacrifice serves as an opportunity for believers in the project to cement an early position in the system before launch. Also, why not?

What happens with the sacrifice funds? - You must have no expectations of profit from the work of others. The founders of this project wish to see **PoorPleb (\$PP)** become the best meme token ever created, they may provide liquidity or use it for promotion, they may buy a Lamborghini. It is totally irrelevant to the project's success what happens with these funds.

Who controls the sacrifice address / contract creation address?

- Nobody knows, nor will we ever disclaim this information. You can use your imagination, it might be an African priest, it might be a homeless person. It is totally irrelevant to the success of the project.

Who are the developers? - Developers will remain anonymous, the project founder is Hexy Bastard.

What will the price be on launch? - We are unable to comment as we do not want to be classed as a security. However, one would assume the initial price would be higher than the sacrifice rate, of which the base rate before volume bonus would be \$0.00001.

Disclaimer: If you have ever viewed a token chart on launch you will be aware that the volatility can be insane, timing this to achieve the best price may not be ideal, therefore it is unlikely you would be able to ever purchase **PoorPleb (\$PP)** for less than the sacrifice rate. However, you must have no expectations of profit from the work of others, it will be up to the free market to decide the token value.
